Physics Simulation R&D at **SQUARE ENIX®**

Witawat Rungjiratananon
Simulation R&D Engineer
(rungwita@square-enix.com)

- Academic background
 - PhD and post-doc at Tokyo University (2012)
 - Research on physics simulation
 - Mostly hairs and sand

Particle simulation &
wetting sand

Hair simulation &
wetting hair

Other simulations

- Working at Square Enix
 - Joined the Advance Technology Division in 2013
 - Physics simulation systems of cloth, hair, fur, ...
 - Runtime systems & authoring tools
 - Used on several on-going games projects
 - Main project = Final Fantasy XV (*2nd Business Division*)

- Many screenshots/ videos
 - They are from my prototyping environment
 - Most are from old work-in-progress experiments
 - They are not representative of final quality
- Special thanks to Mr. Tabata and the artists of the Second Business Division

- Introduction
- Cloth
- Hair
- Wind
- Foliage and fur
- Conclusion

- Topic of this talk
 - Sharing R&D experience in creating simulation systems for AAA title games
 - Difference between Academia & Game Industry

© SQUARE ENIX CO., LTD. All Rights Reserved. MAIN CHARACTER DESIGN: TETSUYA NOMURA

- Academia vs Game Industry
 - Driving force towards goal

Pick up topic of interest
Challenge to solve problems

Motivation driven

- Academia vs Game Industry
 - Driving force towards goal

- Academia vs Game Industry
 - Working with professional designers

- Academia vs Game Industry
- Doing tricks or fakes is OK
 - We don't do this in the academic area
- Sharing limited resources with AI, Graphics, etc.,
 - Especially on gaming consoles

Cloth simulation

- Our goal
 - To simulate jackets, accessories and all shaky soft bodies on characters and monsters

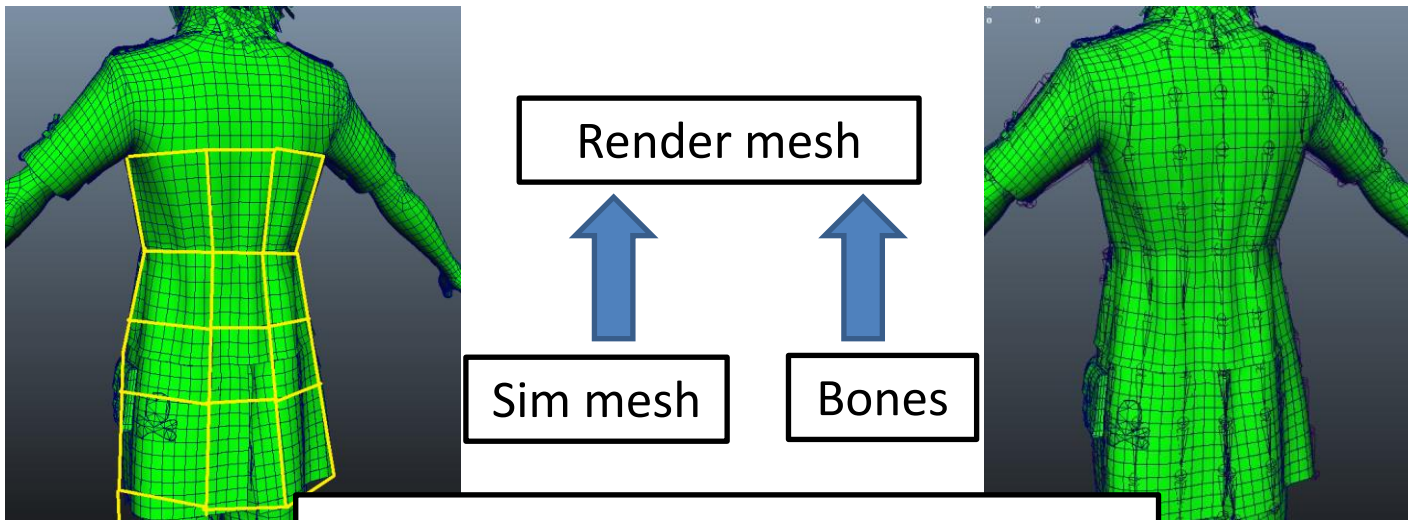

© SQUARE ENIX CO., LTD. All Rights Reserved. MAIN CHARACTER DESIGN : TETSUYA NOMURA

- What are our choices ?
 - Lot of simulation methods in the field
 - Simulation on vertices or bones
 - CPU and GPU implementation

- What did we do ? and why ?
 - Simulation method:
 - Fast and stable particle-based method
 - Simulation on vertices or bones
 - Bone-based (More flexibilities and controls)
 - CPU and GPU implementation
 - We can switch, depending on whether GPU is heavily used for graphics or not

- Vertex-based vs. bone-based

Lower resolution sim
driving render

**What critical to our decision is
how designers setup physics**

Skeletal bones
driving render mesh

- Vertex-based vs. bone-based
 - Vertex-based examples

Create low res. sim mesh
from render mesh

Map sim mesh with
render mesh

Done! Easy!
Simple shapes can be
easily automated

- Vertex-based vs. bone-based
- But how about these assets ?

Create sim mesh and do the mapping ?
or
Put bones and skin them ?

Designers are familiar with bones setup,
and there are tons of tools helping them do the skinning

- Vertex-based vs. bone-based
 - Branching and layering → bone-based

- Vertex-based vs. **bone-based**
 - Animation blending
 - Cinematic scene: more like a performance, less like a natural phenomenon
 - Working on bones gives artists both simulation and animation control

- Results

- Results

© SQUARE ENIX CO., LTD. All Rights Reserved.
MAIN CHARACTER DESIGN : TETSUYA NOMURA

- Difficulties and limitations
 - Developing realism (simulation) on top of unrealism (games motion)
 - Fast motion → breaking, tunneling collision problem
 - Limit an effect of fast motion on cloth, yet preserve degrees of freedom as much as possible

- Tricks and tips
 - For designer's ease of use, avoid real physical units (e.g. Newton per meter ?!). Instead, use normalized parameters [0=soft 1=hard]
 - Simulation + Vertex animation (Flappy cloth)

- Tricks and tips

© SQUARE ENIX CO., LTD. All Rights Reserved.
MAIN CHARACTER DESIGN : TETSUYA NOMURA

- Tricks and tips
 - Make an authoring system highly customizable as much as possible
 - Not necessary to be just point masses on bones and a network of constraints
 - Make it possible to place point masses and constraints anywhere -> maximize artists creativities

- Results (bonus)
 - Something from artists creativities

© SQUARE ENIX CO., LTD. All Rights Reserved.
MAIN CHARACTER DESIGN : TETSUYA NOMURA

- Results (bonus)
 - Something from artists creativities

Hair simulation

Hair simulation

- Our goal
 - Simulate all sorts of stylish hairstyles, at high quality
- The design & the look are very important

© SQUARE ENIX CO., LTD. All Rights Reserved.
MAIN CHARACTER DESIGN : TETSUYA NOMURA

- Problems
 - Usual approaches freely simulate very soft hairs and do not “protect” the hairstyle
 - Conundrum: hairs need to be stiff and soft at the same time !

A. Selle et.al, SIGGRAPH 2008

- What did we do ? and why ?
 - Bone-based
 - Rich set of constraints →
 - Easier to provide artistic controls
 - Lower designers' learning cost:
one system for both hair and cloth

Constraints

- Length
- Uniform cone
- Non-uniform cone
- Long range attachment
- Shape matching
- Pin constraint
- Sphere constraint
- Double sphere constraint
- Spring constraint
- Attribute transfer link

Collisions

- Sphere
- Capsule
- Triangle
- Inverse sphere
- Inverse capsule
- Plane

- Tricks
 - Shaky hardened hair
 1. Stiff constraint to keep the look

Stiff constraint to keep the look

- Tricks
 - Shaky hardened hair
 1. Stiff constraint to keep the look
 2. Soft constraint on the stiff

- Results

FINAL FANTASY XV PAX Prime 2015

© SQUARE ENIX CO., LTD. All Rights Reserved. MAIN CHARACTER DESIGN : TETSUYA NOMURA

SA2015.SIGGRAPH.ORG

© 2015 SQUARE ENIX CO., LTD. All Rights Reserved.

Sponsored by

- Difficulties and limitations
 - Collision still breaks the look (a bit)
 - Use only sphere and capsule shapes for colliders
 - When you give artists flexibility
 - → they tend to pay attention to every small detail
 - → consume too much resources
 - → Visualize budget for them

Wind

- Our goal
 - Cloth and hair need wind to look believable
 - Look not too procedural

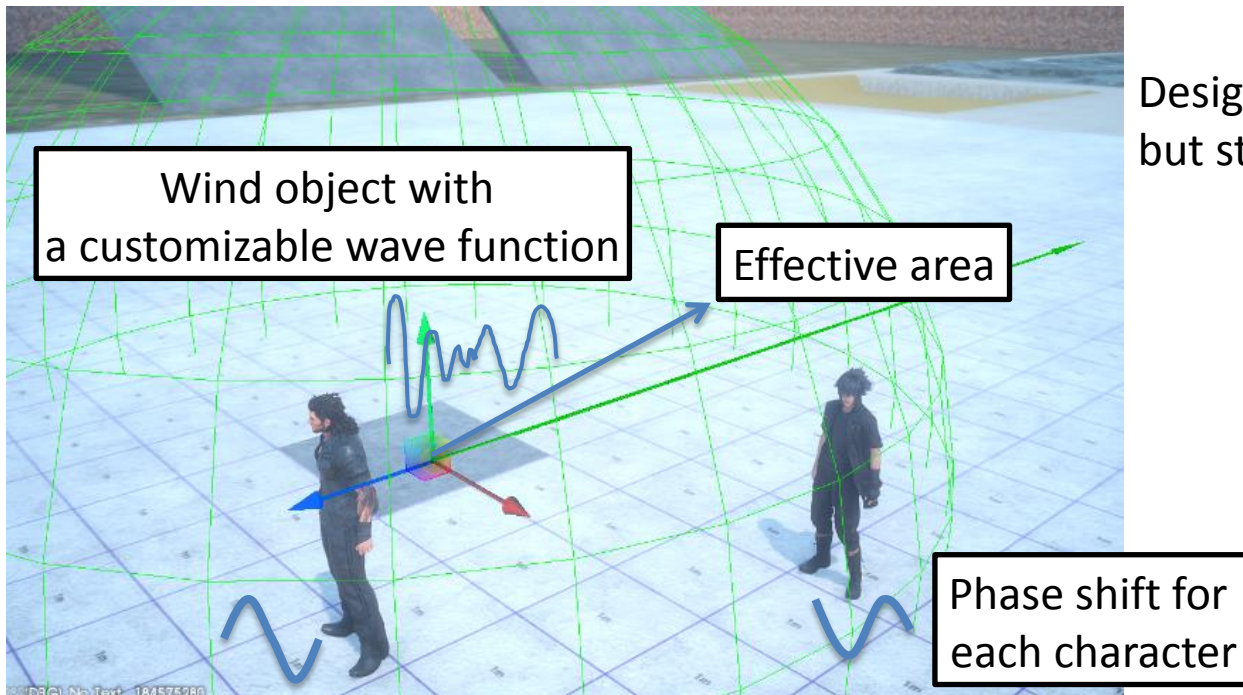

FINAL FANTASY XV PAX Prime 2015

© SQUARE ENIX CO., LTD. All Rights Reserved. MAIN CHARACTER DESIGN : TETSUYA NOMURA

- What are our choices ?
 - Fluid simulation → **Big no**
 - Wave functions

- What did we do ? and why ?
 - Wave functions, area, dynamics, phase shift

Designers have an image of wind, but struggle to create a wave fn.

Designers

© SQUARE ENIX CO., LTD. All Rights Reserved. MAIN CHARACTER DESIGN : TETSUYA NOMURA

- What did we do ? and why ?
 - Wave functions → Hand drawing wind

Designers

- Results

Foliage and fur

Foliage and fur

- Our goal
 - Tons of foliage and fur in a scene
 - Waving in the wind naturally

© SQUARE ENIX CO., LTD. All Rights Reserved. MAIN CHARACTER DESIGN : TETSUYA NOMURA

- What is the output ?
 - Rain in FFXV
 - Wet the dog

Dry dog

Wet dog

© SQUARE ENIX CO., LTD. All Rights Reserved.
MAIN CHARACTER DESIGN : TETSUYA NOMURA

- What are our choices ?
 - Simulation → No, too costly
 - Procedural vertex animation

© SQUARE ENIX CO., LTD. All Rights Reserved. MAIN CHARACTER DESIGN : TETSUYA NOMURA

Foliage and fur

- What did we do ? and why ?
 - Do procedural vertex animation

Vertex color

Wind

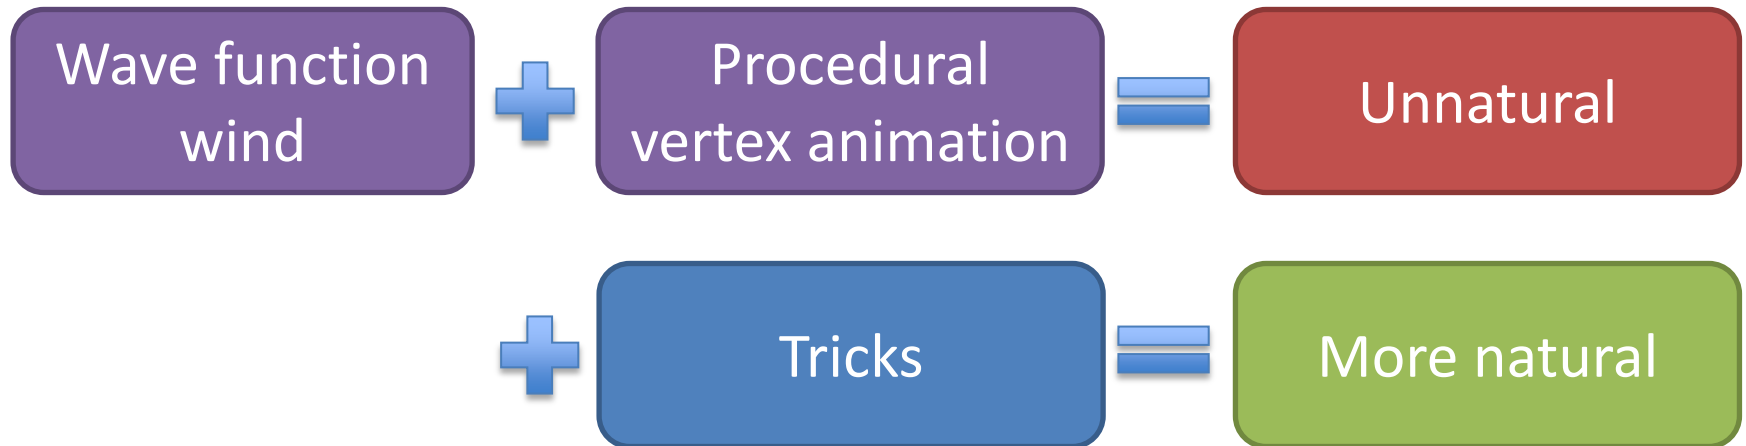

Length constraints

wind influence quantity

- What did we do ? and why ?
 - Do procedural vertex animation

- What did we do ? and why ?
 - Do procedural vertex animation
 - More random look: add noise map

Noise map

- What did we do ? and why ?
 - Still looks procedural → random travelling wind

Travelling wind

- Tricks
 - Vertex animation + normal vector animation
 - Fake the effect of leaves overlapping onto each other

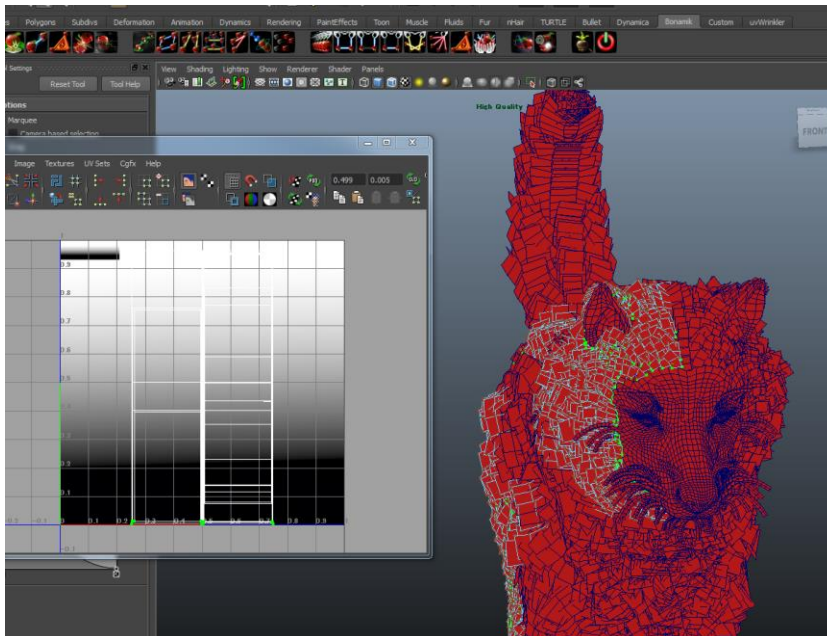

Foliage and fur

© SQUARE ENIX CO., LTD. All Rights Reserved. MAIN CHARACTER DESIGN : TETSUYA NOMURA

- Fur vertex animation
 - Waving fur is pretty much the same with foliage
 - Color texture instead of vertex color

Foliage and fur

© SQUARE ENIX CO., LTD. All Rights Reserved. MAIN CHARACTER DESIGN : TETSUYA NOMURA

- Fur vertex animation
 - Procedural wet fur: mesh shrinking

Foliage and fur

- Academia vs. Game Industry:
 - Motivation driven vs. production driven
 - Very limited resources on gaming consoles
 - The best tech is not always the best approach
- R&D in soft body simulation
 - Fur, Hair, Cloth, etc...
 - Flexible/reusable system
 - Artists-friendly interface→cool results

- What I like about the game industry
 - Heterogeneous environment
 - A lot of smart, talented people
 - “Hard” science + possibility for tricks = fun
 - Experiment on game assets
 - Cross-disciplinary team results

Special thanks

- To the 2nd business division and the Final Fantasy XV team for giving me access to awesome assets and letting me share these results
- My colleagues from the Advanced Technology Division
